

EV Clinic vs SehaFlow

Competitor Comparison and Development Priorities

Exclusive Vision | Prepared for the development team | 3 October 2026

1. Purpose

This document compares EV Clinic with SehaFlow, a clinic management system by NavyBits that markets itself as Lebanon’s leading clinic system. It lists what EV Clinic needs to match or beat SehaFlow, and the order in which to build it.

EV Clinic will launch in Lebanon first, then expand to Syria, Nigeria and Ghana. Lebanon is SehaFlow’s home market, so EV Clinic will be compared with it directly.

The SehaFlow information comes from their public product page. The EV Clinic information comes from testing the demo at ev-clinic.kiaansoftware.com on 3 October 2026.

2. Feature Comparison

Action key: red = build or add, amber = check or later phase, green = keep and promote.

Feature	SehaFlow (competitor)	EV Clinic (current demo)	Action for EV
Automatic WhatsApp messages	Yes. Reminders, confirmations, payment follow-ups and daily doctor schedules, from ready Arabic/English templates with set send times	Manual WhatsApp button only (in the assessment screen)	Build: automatic reminders and confirmations
Calendar and ease of use	Clear, color-coded calendar; smooth, simple screens	Calendar does not show bookings; Week/Month views do not work; login takes 10–15 seconds	Build: new calendar and faster screens (see section 4)
Doctor / clinic website	Free website created at sign-up: own subdomain, drag-and-drop editor, AI-written content, online booking, SEO, mobile-ready	Not available	Build: website builder per clinic/doctor
Arabic interface (RTL)	Full Arabic, right-to-left, bilingual patient records	English only	Build: full Arabic RTL
French language	Not offered	Not offered	Add: French for Lebanon (an edge over SehaFlow)
Dental chart	Yes	Not available	Build: interactive tooth chart
Assessment templates	Templates for general, specialist and dental	One custom form only	Build: General, Dental and Orthopedic templates
AI features	Lab result extraction from scanned reports, scan-to-note, AI content writing, auto-translation	Not available	Later: phase 2
Analytics and graphs	Revenue trends, no-show rate, patient volume	Numbers only, no graphs	Build: graphs on accounting and clinic dashboards

Feature	SehaFlow (competitor)	EV Clinic (current demo)	Action for EV
CNSS and insurance	CNSS tracking and insurance claims	Not available	Build: CNSS and private insurance claims
Inventory alerts	Expiry date and reorder alerts	Pharmacy module exists; alerts not confirmed	Check: add expiry and reorder alerts if missing
Dual currency USD / LBP	Not mentioned	USD only; no LBP option	Build: USD and LBP on invoices with clinic exchange rate
Pricing and free trial	Pay-as-you-go credits, 100 free credits, credits never expire	No active plans published on the website	Set up: published plans and a free trial
Lab, radiology, pharmacy departments	Not mentioned	Yes, each with its own login and workflow	Keep: promote as a key strength
Patient portal	Not mentioned	Yes: booking, reports, bills, documents	Keep: promote as a key strength
Multi-clinic platform	Multi-doctor within one clinic	Multiple clinics with central super admin	Keep: promote as a key strength
Medical reports	Not mentioned	Sick leave, fitness, accident, company reports	Keep
Markets	Lebanon only (claims 50+ clinics and about 15,000 appointments a month)	Lebanon first, then Syria, Nigeria, Ghana	Build: settings per country (see section 5)

3. Where EV Clinic Is Already Stronger

These should be kept, polished and used in marketing:

- **Full departments:** lab, radiology, pharmacy, accounting and document control, each with its own login and workflow.
- **Multi-clinic platform:** one super admin managing many clinics, modules and subscriptions.
- **Patient portal:** patients book appointments and see their reports, bills and documents.
- **Ready medical reports:** sick leave, fitness certificate, accident report and company report.
- **Lab and radiology linked to payment:** samples are not collected before payment (radiology should follow the same rule).
- **Multi-country plan:** SehaFlow covers Lebanon only.

4. Look and Feel: Calendar and Smoothness

SehaFlow feels smooth and clear: the calendar is easy to read and colors make each appointment's status obvious at a glance. EV Clinic must match this, because clinics judge the system in the first minutes of a demo. Requirements:

Calendar

- **Color-coded appointments by status:** booked, confirmed, checked in, in consultation, completed, cancelled, no-show. Show a small legend on the page.
- **Color per doctor** when viewing all doctors, so reception sees who is busy at a glance.

- **Working Day, Week and Month views**, plus a list view for today.
- **Booked appointments shown in their slots** with patient name, service and status; the doctor's off days and breaks greyed out.
- **Click an empty slot to book**; drag an appointment to reschedule; hover or click to see details.
- **Booked slots blocked automatically** so double booking is impossible.
- **Current time line** on today's view, and a quick jump to today.

Overall smoothness

- **Speed**: login and page changes should take about 1–2 seconds, not 10–15.
- **One consistent color system**: the same colors mean the same status on every screen (calendar, queue, dashboards, billing).
- **Clear dashboards**: graphs and simple cards instead of plain numbers.
- **Fewer clicks**: common tasks (book, check in, pay) reachable in one or two clicks from the dashboard.
- **Loading states and empty states**: show a skeleton while loading and a helpful message when a list is empty, instead of a blank page.
- Works well on tablet and mobile.

5. Requirements per Country

Lebanon (launch market)

- **Languages**: Arabic (right-to-left), English and French.
- **Currency**: USD and LBP on the same invoice, with an exchange rate each clinic can set.
- **Insurance**: CNSS and private insurers: claim tracking, approvals, patient share vs insurer share.
- **WhatsApp**: automatic confirmations and reminders in Arabic and English.
- **Website**: website builder for each doctor or clinic, with online booking.
- **Connectivity**: fast, light pages that work on weak internet; consider an offline mode for reception during power or internet cuts.

Syria (next)

- Arabic first, low bandwidth, SYP currency.
- Confirm the current sanctions rules for payments, hosting and WhatsApp Business before launch.

Nigeria and Ghana (later)

- **Language**: English interface. Keep SMS as a backup to WhatsApp.
- **Insurance**: NHIA and private HMOs in Nigeria; NHIS in Ghana.
- **Payments**: Paystack or Flutterwave in Nigeria; mobile money in Ghana. Currencies NGN and GHS.
- **Data protection**: Nigeria Data Protection Act and Ghana Data Protection Act.

Important rule for the build

Language, currency, insurance, payment methods and message templates must be settings per country and per clinic, not hard-coded. Adding a new country should then be a setup task, not a rebuild.

6. Priority Order

1. **Fix the open bugs** from the 3 October test report (license edit and lockout, calendar, double booking, queue display, \$0 invoice totals) and remove the one-click demo login buttons from the login page.
2. **New color-coded calendar and speed improvements** (section 4).
3. **Arabic interface** (right-to-left) and USD / LBP dual currency.
4. **Automatic WhatsApp** confirmations and reminders.
5. **Assessment templates** (General, Dental with tooth chart, Orthopedic) and graphs on the dashboards.
6. **Doctor / clinic website builder** with online booking.
7. **CNSS and insurance claims**.
8. **Published pricing plans** with a free trial.
9. **French language** and country settings for Syria, Nigeria and Ghana.
10. **Later phase:** AI lab report reading and inventory expiry / reorder alerts.
